## Information about Copyrighted Content

Some instruments administered for studies archived with ICPSR may contain in whole or substantially in part contents from copyrighted instruments. Reproductions of the instruments are provided as documentation for the analysis of the data associated with this collection. Restrictions on "fair use" apply to all copyrighted content. More information about the reproduction of copyrighted works by educators and librarians is available from the United States Copyright Office.

### NOTICE

#### WARNING CONCERNING COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

**README File for ICPSR #38304**  
*Military Health and Well-Being Project, United States, 2020*

The zipped package available for download contains two supplemental Stata syntax “.do” files used for cleaning and scoring the final dataset. Users can view these files using Stata software or a text editor software program.

Files in the zipped package:

- cleanupsyntax\_working\_08.19.do
- scalescoring8.31.do

**ICPSR Processing Notes**

1. **Syntax Discrepancies:** The following discrepancies were identified in the supplemental syntax file “scalescoring8.31.do” with variables **STRESS\_COUNT** (syntax command line 18), **SOC\_INTEGRATION\_1R** (syntax command line 109), and **SOCINT\_MEAN** (syntax command line 113).
  - a. The P.I. Codebook indicates that the variable **STRESS\_COUNT** is the “count of number of stressful events reported”, and there are seven **STRESS\_#** variables in the data file. However, according to the syntax file, the variable **STRESS\_6** was not used to compute the variable **STRESS\_COUNT**; no additional information was provided.
  - b. Users should take caution when using the variables **SOC\_INTEGRATION\_1R** and **SOCINT\_MEAN**. According to the syntax file, the variable **SOC\_INTEGRATION\_1R** was computed using **SOC\_CONTRIBUTION\_1** instead of the expected variable **SOC\_INTEGRATION\_1**. The unexpectedly computed **SOC\_INTEGRATION\_1R** was then used to compute **SOCINT\_MEAN**; no additional information was provided.
